

Industrial Unified SaaS Platform Development and Support for a US-based leading industrial networking company

Key Challenges

- A leading industrial networking company needed an R&D partner to enhance its cloud platform for managing legacy and new IIoT devices.
- They required secure connectivity, remote orchestration, and a unified user interface.

Business Solution

- Incedo ensured a smooth handover from previous partners with a detailed plan, staggered releases, and knowledge transfer. They focused on understanding the client's business and technical goals.
- Incedo completely owned the platform, designing a robust solution with persistent cloud connectivity, security, remote orchestration, edge deployment, OT data handling, and comprehensive monitoring.

Business Benefits
