

Unified Management Platform Development & Support for a US-based Cybersecurity Firm

Key Challenges

- Cost, time and complexity involved transforming legacy products to a scalable SaaS platform
- Improved time to market. Need for a uniform state of the art, cloud ready product design, based on a unified SaaS platform
- Consistent state of the art user experience

Business Solution

- > Defined clear KPIs for both business success and technical performance for a smooth product rollout
- > Implemented a product ownership delivery model for parallel development, continuous integration and efficiency
- > Established a new CI/CD pipeline for automated daily testing and agile test-driven development, improving quality
